BMP EOC #10

TITLE: SCRAP METAL RECYCLING

Regulatory Citation: 6 NYCRR Part 371.1(g)

Applicability: Scrap metal from welding class

Purpose: Proper management and recycling of scrap metal (not including lead batteries)

Person or Department Responsible: Associate Coordinator of Business Services

Schedule: As needed

Procedures: All scrap metal generated will be segregated from other waste and stored inside the welding shop in a bin designated for scrap metal only. The scrap metal containers must be stored away from rainwater and periodically inspected for spillage. Once the bin is full the Welding Supervisor will contact the Associate Coordinator of Business Services to arrange transport of the scrap to the approved local scrap dealer for recycling.

The Director of Environmental Health and Safety is responsible for submitting notification to the State Dept of Environmental Conservation under 371.1(c)(7) of our intent to use the scrap metal exemption. If the disposal/recycling vendor changes, the Associate Coordinator of Business Services will notify the Director of EHS so that an updated notification can be filed.

For lead containing batteries, see BMP #14 for proper handling.

Current Vendor: Freedman's, Green Island, NY

Record keeping: scrap metal receipts

Record Location: Associate Coordinator's office

Contact: Asso. Coord of Business Services 273-1900
Director of Environmental, Health and Safety 629-7163
